## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 1-46 are allowed.
2. The following is an examiner's statement of reasons for allowance: the cited prior art teaches random accessing mobile networks for monitoring reverse common channel with adaptive loading calculation scheme and bits-symbol-to-symbol mapping on transmitting on downlink. On the other hand, the applicant teaches DL DPDCH having transport power control field for receiving enhanced uplink dedicated channel that generates a p-bit acknowledgment if the received data is normal otherwise a p-bit non-acknowledgement if the data received is abnormal and determining a bit position to transmit and second data fields of DKDPDCH for puncturing p bits in the determined position therein inserting the acknowledgement in the puncturing bits. Furthermore, the position to transmit the acknowledgement or NACK determined by  $P(i) = \text{rand}(N_{\text{data}} - p + 1)$  and generating a random variable in a range from 0 to  $x - 1$  is a slot index. These limitations, in conjunction with all limitations of the independent claims, have not been disclosed, taught, or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Drawings***

3. The drawings received on May 21, 2004 are acceptable.
